

Risk-based management verifications in Hungary

Zoltán Pásztor First Level Controller

Introduction

About us – HU Control Body First impressions about risk-based verifications

Short introduction programmes' risk-based verification

Challenges and solutions

Examples of identifying high-risk items

Future plans

First impressions

The verification process has been sped up

More time is available for high-risk items or for other projects.

Big changes compared to previous programming periods

We checked all costs in the previous periods.

There is less uncertainty about the correctness of the unselected items.

First challenges

Hard to create an appropriate and representative sample.

Identifying high-risk items.

Risk-based management verifications in different programmes

	Central Europe Programme	Danube Region Programme	CBC programmes (HUSK, HUSRB, HUHR, HUSKROUA)
	1st and 2nd reports are fully checked. After 2nd report only risk-based sampling.	1st and 2nd reports' staff costs are fully checked, in case of other cost category risk-based verification 3rd report: Only risk-based sampling.	First 2 reports – full check From 3rd report on (if no major deficiencies in the first 2 reports): risk-based sampling
2	Minimum of 10% of each cost category (not less than 2 items).	Minimum of 10% of each cost category (not less than 2 items).	Full check: all items concerned with public procurement, all procurements above 10 000
	 High-risk items: New staff member Substantial change in the percentage of time allocated for a staff member to the 	 High-risk items: New staff member Substantial change in the percentage of time allocated for a staff member to the 	EUR Sampling: items below 10 000 EUR (+ staff costs (real cost)) – minimum 10% per cost category (not less than 2 items)
	 Procurement procedures above 10 000 euros Investments and equipment related investments (regardless of the price) Public procurement procedures 	 project In case of real cost travel and accomodation Investments and equipment related investments (regardless of the price) Procurement procedures above 10 000 euros Public procurement procedures 	

Challenges and solutions Identification of high-risk items

Risk-based verification so far:

- Follows and respects the programme level requirements.
 - No more detailed specific national rules.
- Sample can be based on the controller's professional judgement.
 - For example: We check the higher cost items, new experts, currencies outside from the Euro zone.

Challenges during sampling procedure:

- Check the full partner report or list of expenditures.
- Hard to find high-risk items in the "mass".

Improving the identifications:

- Our solutions for sampling problem:
 - List of employees participating in the project
 - Market value declaration

Future plans

Continuous review of documents supporting risk analysis

Reaction to the partners advice.

Typical mistakes done by partners

Constant contact with JSs. Exchange of experience in personal and online meetings.

Application of the recommendations made by the second-level audit during the audit processes.

Thank you for your attention!
