

IT Tools and monitoring Systems Network

21 October 2026

Draft Agenda

Lyon | France

IT Tools and Monitoring Systems Network

21 October 2026

Lyon | France

Outlines

The IT tools and monitoring systems network serves as a platform for experts in Interreg monitoring systems and related IT tools to engage in Europe-wide learning and information exchange. These monitoring systems are crucial for effective programme management and represent programmes to the outside world.

The network welcomes experts involved in monitoring system work and encourages programme service providers to participate.

The meeting follows a flexible and participant-driven approach, with the agenda shaped based on the topics proposed during registration. Attendees can expect informative presentations, demonstrations, and open discussions on monitoring systems and shared challenges.

Importantly, the event is not related to the Jems monitoring system.

This Monitoring system network will be slightly different than usual, we organize this meeting back-to-back with the Jems User group meeting and plan a joint morning session with the Jems User group to have all monitoring systems together to talk about the future.

Objectives

The main objectives of the meeting are to foster knowledge exchange and collaboration among experts in Interreg monitoring systems and related IT tools.

The meeting aims to provide a platform for participants to share experiences, insights, and best practices. It also seeks to showcase feature demonstrations of various monitoring systems, inspiring attendees with innovative and useful features. Through open discussions, participants can address common challenges, seek advice, and find potential solutions. Additionally, the meeting aims to gather input on potential topics for future gatherings, ensuring relevance and value for the IT Tools and Monitoring Systems Network. Ultimately, the meeting aims to enhance programme management and efficiency in monitoring systems through collective expertise and shared learning.

IT Tools and Monitoring Systems Network
