The AI Challenge – Questions

How can we ensure that sensitive data is not flowing into external AI systems?

How can we make the reasing of the AI system traceable and transparent?

How can we make sure that the assessment is consistent and the result of a systematic and standardized process?

The AI Challenge – the two AI approaches

Criteria	MCP (JUSE)	Copy and Paste
Workflow integration	AI as an integrated, controlled and traceable part of the assessment workflow	AI as an external Assisstent
Grounding	Structured, authorized, direct access to Jems and tools	Manual selection, copying, pasting
Consistency	Consistent, standardised procedures	Individual prompts
Data Protection (EU-AI-Act)	Controlled access to authorized data	Risk of exposing sensitive data
Traceability	Used tools, assessment steps, data sources can be logged	Difficulty in reconstructing trace
Efficiency	Automated retrieval and processing	Repetitive manual work
